

Even the best products are not well received if the customer does not know how to handle them properly. It is thus a matter of particular concern to us that our expertise is passed on to all customers, service operations and workshops that work with our products on a daily basis, and continuously inform them about new developments. This is the only way we can ensure that our products function properly and that the vehicles are available on the road.

The VALEO Thermal Bus Training Academy offers training courses tailored to the market and operating conditions. In addition to the standard training courses listed below, we also develop training courses tailored to your needs and hold them for a corresponding number of employees on site.

Basic training

- Refrigerant circuit, physical processes (pressure, temperature)
- Components in the refrigerant circuit
- Components in the air conditioning system
- Different air conditioning concepts
- Maintenance on Valeo air conditioning systems

Attendees:

Workshop personnel with no experience in dealing with bus air conditioning systems

Target:

Participants understand the basic functions and processes in a refrigerant circuit and are familiar with the various air conditioning systems.

Expert training

- Symptoms of the refrigerant circuit
- Evacuate and fill the refrigerant circuit
- Repair and service work

Attendees:

Workshop personnel with experience in dealing with air conditioning systems, who want to be trained on new systems.

Target:

Participants are able to find faults in the air conditioning systems, carry out the necessary repair work as well as necessary maintenance and service work.
